Hello Chris,

Please see below for an update on site activities. We are down to waiting on just a few samples.

Mike

Mike

As discussed they are backfilling Bld C and the Process Area (we are waiting on one pothole sample south of the waterline near the SE corner of Bld C excavation sample which if passing we will be done with Bld c excavation), we also collected a couple of samples from the paint pit to determine the level of contaminants. The paint pit excavation is on going to the N,W and E. We are planning to do the additional excavation in the NE corner tomorrow morning. They have also cut out 6 inches beneath some of the former stockpile locations near Bld c. We are waiting on all of the contaminated soil to be hauled out (roughly 30 truckloads) prior to collecting those samples. We also collected a rinsate sample today from the frac tank that was used to store the rinsate water generated from cleaning the buildings.

Let me know if you have any question.

Thanks

Brady

Thanks. What is the status on the rest of the site? Is all the excavation/backfill completed ?
